

Kishor Kumar Jaripothu

+91 8106194592 | kishorjaripothu@gmail.com | Bangalore | [Linkedin](#) |

Professional Summary:

Data Analyst with 4.5+ Years of experience in solving business problems, proficient at **Python Programming, SQL Administration & Queries, Power BI** for Visualizations, **Alteryx** etc for ETL. Demonstrating expertise in **SaaS Implementation**, particularly in **Incentives Commission Automation** and **Automated Reconciliation & Billing Systems** Design in **E-Commerce** domain.

Experience and Projects

Data Analytics Engineer: Jul 2022 – Apr 2026

SENIOR DATA ANALYST | FLIPKART (via Enterprise Minds Pvt. Ltd.), Bangalore

May 2025 – Apr 2026

- Collaborate with the Finance division of Flipkart to perform **data extraction, data processing, reconciliation, and audit analysis** for e-commerce financial operations over the Hadoop Distributed environment (FDP- Flipkart's Data Platform).
- Ingested raw supplier transaction data from multiple source systems into Databricks (Delta Lake) and wrote complex SQL queries to model on-time delivery rates, order fill rates, lead time variance, and defect ratios across 1Lakh+ vendors - creating a clean, analytics-ready dataset.
- Execute order-level Root Cause Analysis (**RCA**) to resolve financial misalignments and automate accurate Buyer/Seller invoicing, ensuring data integrity across workflows and Bank Reconciliation Statements (**BRS**).
- Contributed **goodness of ~492.33cr** over the six months Project timeline which is direct value addition to Flipkart's business.
- **Automated end-to-end validation workflows** using Python and Pandas — from data fetching to business rule checks — **reducing manual validation time by ~70%**.
- Built and optimized **Python scripts** for financial data validation and reconciliation, improving accuracy and audit turnaround time.
- **Led** and mentored a **validation sub-team** to ensure accuracy and completeness of the Audit POD's reconciliation and fix processes.
- Developed a **Power BI** dashboard for the **Revenue Assurance** Team to visualize and analyze Return Order trends, improving visibility into return dynamics and regional patterns.
- Partnered **cross-functionally** with Finance, Data Engineering, and Operations teams to **streamline reporting pipelines** and ensure compliance with internal audit standards.

DATA ANALYST | AUROCHS SOLUTIONS PVT LTD, Pune

Jul 2022 – Nov 2024

- Supported end-to-end Sales Force Effectiveness (SFE) engagements for pharma clients, contributing across field force sizing, territory alignment, call planning, targeting, and **Incentive Compensation (IC)** - ensuring commercial operations ran with data-driven precision.
- Conducted elicitation sessions as a primary client liaison to create detailed Functional Requirement Documents (FRDs) and Business Requirement Documents (BRDs)
- Designed and implemented process flows, UML diagrams, mock dashboards, High-Level Designs (HLDs), and Low-Level Designs (LLDs) using LucidChart, improving delivery timelines by 20%.
- Developed process flows and created LLD, ERD diagrams that provided a clear understanding of the ETL processes, data mappings, which helped to identify potential issues and improve overall data quality.
- Extract data from diverse cloud platforms, including AWS and Snowflake data warehouse.
- Execute data transformations using SQL, Alteryx, PySpark, UNIX Shell Scripting (to orchestrate recurring jobs), and proprietary in-house tools that incorporate Python coding, and load the processed data into Power BI for dashboarding purposes.
- Developed detailed **tailored reports and visual dashboards**, enabling **300+ stakeholders** to track and optimize sales compensation plans, resulting in a 38% increase in team performance.
- Led User Acceptance Testing (UAT), identifying and resolving critical issues before deployment and worked with ticketing systems under strict SLA adherence to resolve data issues.

DATA ANALYTICS INTERN | NXTWAVE TECHNOLOGIES PVT LTD, Hyderabad

Jul 2021 – Jul 2022

- Extracted and prepared large datasets using SQL queries from relational databases, ensuring data accuracy, consistency, and completeness for downstream analysis. Jun 2021 – Jun 2022
- Cleaned, deduplicated, and transformed raw data using Pandas, addressing missing values and outliers to enhance data reliability and improve analytical accuracy.
- Conducted exploratory data analysis (EDA) using Pandas and Excel, identifying key trends, correlations, and business

- Developed custom reports and visualizations in Excel using PivotTables, charts, and conditional formatting to present findings in a clear and actionable format.

Projects:

Financial Modelling & Revenue Forecasting Framework | Python . Power BI | Built an integrated three-statement financial model (Income Statement, Balance Sheet, Cash Flow Statement) dynamically linked in Python and Excel, serving as the foundation for budgeting, performance analysis, and revenue forecasting across business scenarios. • Designed scenario and sensitivity analyses (best case, base case, worst case) to stress-test revenue assumptions, quantify financial exposure, and prepare leadership for growth opportunities and downturns.

Credit Risk Analysis | Python . SQL . Power BI | Built a credit risk scoring model to classify loan applications as high-risk or low-risk using borrower financial profiles - including DTI ratio, loan amount, interest rate, repayment history, and debt settlement flags - directly mirroring real-world credit underwriting and portfolio risk assessment workflows. • Evaluated multiple risk models (Logistic Regression, Random Forest, Ensemble Classifiers) against key financial risk metrics - precision, recall, and F1-score - achieving 94% accuracy, enabling more reliable loan approval decisions and portfolio monitoring.

Supplier Performance & Risk Analytics | SQL . Databricks . Power BI | Built an end-to-end supplier analytics solution on Databricks to monitor vendor performance, identify at-risk suppliers, and surface sourcing insights, ingesting and harmonising multi-source procurement data into a dimensional model powering a self-service Power BI scorecard.

Employee Attrition Prediction and Retention Strategy | Python . Scikit Learn . Power BI | Built a logistic regression model and random forest classifier to predict the likelihood of employee churn. Created interactive dashboards using Power BI to visualize high-risk segments by department, role, and location. Collaborated with HR business partners to interpret the findings and suggest actionable strategies like tailored development plans, compensation adjustments, and manager training.

Technical Skills

Programming Languages: Python (Core, Numpy, Pandas, scikit-learn) DBMS(Databases): MySQL, SQLite, SOQL, PostgreSQL ETL & Big Data Processing: Hadoop, PySpark, Snowflake, DataBricks Visualization Tools: Power BI, Tableau (Basic Proficiency) Cloud Services: AWS (S3, RDS, EC2, Lambda) Machine Learning & AI: Linear + Logistic Regression, Decision Trees, K-Means, Classification, Clustering, Feature Engineering, Model Evaluation, Scikit-learn, Claude Data Governance & Quality: Data Quality Monitoring, Deduplication, GDPR, CCPA & OFAC Compliance	Functional Overview: Financial Modelling, Reconciliation, Root Cause Analysis, Revenue Assurance, Client Engagement, Stakeholder Management, Cross-Functional Team Collaboration, Team Management
--	---

Certifications and Appreciation

- Microsoft Power BI: Certification (Data Analyst) | By Maven Analytics
- Certificate of Appreciation by the Previous Company for the contributions made in Incentive Industry – [Appreciation Post](#)
- Participated in VLSI Workshop on ASIC, FPGA, Electronics conducted at RGUKT RK Valley

Education

Rajiv Gandhi University of Knowledge Technologies, RK Valley Bachelor of Technology in Electronics and Communication Engineering, Secured an aggregate of 7.43 CGPA	Kadapa, India 2017 – Aug 2021
